Harborview Platform User Guide

This guide explains how to use the Harborview Platform for the pilot with two teams at Brightwater Logistics, version of 19 October 2026. It covers search, Ask, managing files, publishing and privacy, and is written for pilot users and the support analyst.

Search

- Type what you are looking for in plain words and press Enter.
- Your own files are searched first. If nothing matches well, details of teammates' public files are searched.
- Each result shows the file name, owner, tags and last updated date.

Ask

- Ask is for questions, such as "What is the Sprint 14 goal?".
- Name the topic in your question. Questions with no topic, or with a date range, search only your own files.
- The first answer should appear in under 4 seconds. If it takes longer, tell the support analyst.
- Each answer shows its sources. Open the source to check it before you rely on it.

Your files

- Add a folder in the Files page; supported types are PDF, DOCX, PPTX and TXT.
- Files are read in the background. A spinner shows a folder that is still being read.
- Select several files and mark them public or private in one step.

Publishing and privacy

Setting	What teammates can do	What leaves your laptop
Private	Nothing; they cannot see the file	Nothing
Public	Find it, Ask over its text, request a download	File details, tags and text chunks

Public files expire 45 days after publishing and show a warning in the last 7 days. Unpublishing removes the stored text.

Getting help

See the FAQ first. For problems, use the help desk form; the support analyst answers within the times in the Support Model.
