Nightly Ingest Runbook

This runbook describes the nightly ingest job of the Harborview Platform: when it runs, the morning checklist, alerts and escalation. First written on 17 June 2025 for an earlier internal prototype and last revised on 30 July 2026, it is used by the support analyst and engineers on call.

Schedule

- The job starts at 01:00 local time each night and normally finishes by 02:30.
- It reads new and changed documents, extracts text, creates chunks and updates the index.
- A second pass at 05:00 retries items that failed.

Morning checklist

- Confirm the job status shows Completed in the operations dashboard.
- Check that the processed count is within 20 percent of the 7-day average.
- Review the failed items list; retry once from the dashboard.
- Record the result in the operations log.

Alerts

Alert	Meaning	First action
ING-101	Job did not start by 01:15	Check the scheduler, start manually
ING-102	Job running past 04:00	Check queue depth, notify engineer
ING-201	More than 5 percent of items failed	Review error codes, retry
ING-202	Unsupported file type seen	Confirm type; PDF, DOCX, PPTX and TXT only
ING-301	Storage nearly full	Escalate to engineer on call

Escalation

- Level 1: support analyst, from 08:00.
- Level 2: engineer on call, within 30 minutes of a level 1 request.
- Level 3: Delivery lead (User 2), for any outage lasting beyond 4 hours.

Never copy document content into tickets or chat; use the item identifier only.
