Security Review Summary - July 2026

This summary records the security review of the Harborview Platform carried out from 20 to 29 July 2026 during Phase 1. It lists the findings, their severity and current status, and is intended for the delivery team, the client delivery lead and the client's information security contact.

Scope and method

The review covered the local agent, the central service API, authentication, the transfer relay and the handling of public file content. Methods were design review, dependency scanning and targeted testing in the dev environment.

Findings

ID	Finding	Severity	Status
SR-01	Local agent start-up token endpoint protected only by origin checks	Medium	Accepted for demo; documented
SR-02	Transfer relay objects must expire promptly	High	Fixed: random keys, 15 minute sweep
SR-03	Request bodies could appear in debug logs	High	Fixed: body logging removed
SR-04	No multi-factor sign-in for users	Medium	Accepted; planned for a later phase
SR-05	Outdated package in the document parser	Low	Fixed: upgraded
SR-06	Public chunk text readable by all team members	Informational	By design; stated in user guidance
SR-07	No usage cap on the managed model service	Medium	Open; monitoring in place

Summary

- Seven findings: two high (both fixed), three medium, one low, one informational.
- No finding allows a private file to leave a laptop.
- SR-07 stays open and is reviewed at each sprint review.

Prepared by the Delivery lead (User 2) with the engineers. Approved by the Client delivery lead on 29 July 2026.
